
Milus Agenios

09 June 2005 | Classic Driver

The high-grade stainless steel Agenios embodies the philosophy of Swiss watchmaker Milus in an unmistakable way. Creativity, precision in production as well as the careful selection of materials distinguishes the new watch from the company. The combination of a stainless steel body, high-grade steel strap, and the harmonious combination of a black, anthracite and silver face makes the Agenios a comfortable travelling companion.

The watch works powerfully and dynamically with its mixture of lines and curves, while the dial expresses sheer dynamism. The silver Arabic numbers in an oval arrangement are clear to read while a small second hand at 6 o'clock means the main dial is clear and un-cluttered. It's the time not the seconds that matter.

The watch is available for a price in the region of 2.550 EURO for steel and is available in the following permutations:

Agenios · stainless steel

Curved sapphire crystal, mechanical movement, manually wound, curved sapphire crystal case back secured with screws, water-resistant to 30 m, small second's display, leather strap with folding clasp

Agenios · 18K pink gold

Curved sapphire crystal, mechanical movement, manually wound, curved sapphire crystal case back secured with screws, water-resistant to 30 m, small second's display, alligator strap with buckle closure made of 18K gold

Agenios · 18K pink gold
