Crystal-Clear Sound: Lime Green Launches Transparent Horn Speakers

24 June 2008 | Classic Driver

High-end digital home entertainment specialist Lime Green now sells the stunning range of transparent horn speakers from award-winning hi-fi company Ferguson Hill. Cast from crystal-clear acrylic, the 1.65m high speakers were recently voted Editor's Choice in 'HiFi Choice' magazine, the publication describing them as 'sonically awesome' and 'larger than life'.

As well as making an emphatic style statement, they reproduce music with a high level of clarity, detail and dynamics, and great tonal subtlety.

The bass system matches the speakers acoustically and visually. The bass units are a pair of clear acrylic spheres and the bass amplifier is enclosed in a polished stainless steel cube. Lime Green's Head Project Manager, Laurie Painter, says, "Ferguson Hill speakers combine high concept design and precision engineering to provide the discerning customer with a system that will not only turn heads but produce an unparalleled listening experience.

"Retailing at over £20,000 for the complete set-up, the speaker system is a monument to good taste and will provide the soundtrack to their lives. It simply blows away any other product on the market."
