## Laguna 760: Silent Cruising

15 July 2008 | Classic Driver

**This elegant boat slides across Lake Starnberg in almost complete silence; for the Laguna 760 is electrically powered. While its looks suggest a speedboat along Riva lines, the engine is far from conventional, boasting a high-performance electric motor with an output of 40kW.**

The power is drawn from cutting-edge lithium polymer batteries, propelling it to a maximum speed of around 40 km/h. At normal cruising speeds, the batteries last for six or eight hours. Even when drawing a heavy current, the batteries should be good for a two-hour trip.

This 'pollution-free' speedboat is available from the German company Gastl. Call +49 (0) 177-454 11 82 or see [www.boote-marian.at](http://www.boote-marian.at). Delivery timescales are currently around six weeks.
