Aston Martin Skis: Morning Frost

Aston Martin has launched a range of skis in four very appropriate colours: Morning Frost White, Quantum Silver, Almond Green and Silver Blonde. They follow on from last winter's special-edition 'Lightning Silver' skis, handmade by Austrian ski specialist Differences.

The skis, available in four sizes (180cm, 173cm, 166cm and 159cm), are intended to provide precise control in both slalom and freestyle skiing. While the race-derived materials make them perfect for all downhill descents, the construction is equally well-suited to more casual skiers. As with the latest Aston Martin sportscars, they boast high-tech materials such as **composites, aluminium** and **carbon**.

If you're looking for even more originality, a bespoke service allows you to specify the colour of your new skis from any of the standard **Aston Martin** exterior paint colours. Find more information at www.astonmartin.com.
