Celsius X VI II

The aim is to create a completely micromechanical mobile phone, powered solely through human energy. The first product along this pathway is LeDIX, a cell phone merged with a tourbillon watch.

LeDIX has been created by the French company **Celsius X VI II**, itself formed by four young entrepreneurs in 2006. They want to “humanise the future of communication”, taking us on from the digital era to a new dawn of micromechanical applications.

Due to reach the market in May, there will be two limited editions of the mechanical phone-watch and four unique pieces. Eighteen examples of the **LeDIX 'Origine'**, in titanium and ebony, will be joined by 28 examples of the **LeDIX 'Noir'**, in titanium-treated PVD and carbonfibre. The four '**Ultimate**' pieces will be uniquely customised for the buyer.

The **LeDIX** will be unveiled in Switzerland this month, at **Baselworld 2010**, Hall 4.0, Stand A01.
