## P9522: Latest Mobile Phone from Porsche Design

21 May 2010 | Classic Driver

**Porsche Design, together with the French electronics company Sagem Wireless, has produced its second mobile phone.**

The company's first, the **P9521**, was a clamshell device. For 2010, the very latest **P9522** is a machined-from-solid, touch-screen beauty made of matt-black anodised aluminium and mineral glass. Weighing in at 139g, the solidity and scratch resistance of the 2.8" widescreen touch display is matched by an aluminium 'chassis' – a design feature that would not be out of place in a **Porsche** sports car.

As a security measure, the **P9522** features fingerprint-recognition technology. The biometric sensor can be used to authenticate users, allowing them to access their data with a fingerprint. The quad-band mobile phone can handle email, video streaming and calendar organisation. It will also play music files and has, as standard, a 5-megapixel, auto-focus, LED flash camera integrated into its back.

The **Porsche Design P9522** is available from Porsche Design stores across Europe. For more

information, visit [www.mobileporschedesign.com](http://www.mobileporschedesign.com).
