Tesla's P100D upgrade makes the Model S the world's quickest car

Lead

Tesla's long-awaited new P100D battery upgrade for its Model S and Model X models not only extends their already impressive range, but also makes them the world's fastest accelerating production cars in their respective sectors...

Ludicrous performance

The face of Tesla, Elon Musk, has revealed that the Model S and Model X will receive an innovative new 100kWh battery pack, extending their ranges to 315 and 289 miles, respectively, and cementing them as, by far, the longest-range electric production vehicles. Furthermore, with the aptly titled 'Ludicrous' mode engaged, the new Model S P100D is claimed to accelerate from 0-60mph in just 2.5sec, making it the quickest car currently on sale anywhere in the world. For a car that weighs over two tonnes and can seat up to seven people, that's simply remarkable.
