## 80 kilometres on a single charge is a cake walk for this e-bike

**Lead**

For the environmentally conscious commuter who lives more than a few blocks from work — and likes to take shortcuts through fields and ditches — the new Kalk off-road e-bike from Cake is the ideal transport option for you...

**Have your cake and ride it, too**

Named after Kalksten, or limestone, which is the bedrock of the Swedish island of Gotland, the Kalk is the first all-electric, zero-emission off-road motorcycle from new manufacturer Cake. With an aluminium frame and carbon-fibre body, the bike weighs just 150lbs, which assists its 16hp mid-motor, powered by a 51.8 volt 50Ah battery, in reaching a top speed of 80km/h — the distance it can go on a single charge. Production is limited to just 50 units, priced at 14,000 euros each.
